# INDICATION SYSTEM Graphic Recorder

## 1 Trend display

As a screen indicating a line graph of data being recorded, the screen is composed of 2 types of horizontal and vertical indications.

## 2 Text-view display

In addition to indicating the measured numerical values, level indication, channel number, channel title (Tag), and alarm information are also indicated.

## 3 Bar graph display

The data being recorded is indicated as a bar graph together with numerical values, unit, or channel number.

## 4 History-view display

Past data stored in memory are displayed in both horizontal and vertical trends. Furthermore, numerical values, units, and channel numbers are also indicated and can be expanded or reduced along time and size axis.

## 5 Status view display

Each channel indicates alarm operations, outer contact point inputs (D/I), and relay outputs (D/O), composing the screen into 3 parts of event-log and memory use indication, et cetera.
